## FUEGO VOLCANO'S ACTIVITY SUMMARY

On June 3rd 2018, Guatemala experienced one of the strongest natural disasters the country has had. The Fuego volcano erupted, affecting the villages, hamlets and colonies surrounding the Volcano, many of them belonging to the municipality of Escuintla, Alotenango and San Pedro Yepocapa, which were buried by the violent pyroclastic flows.

The families that were affected by the volcanic disaster of the Ceylan community were benefited with an ONIL water filter in each house, allowing them to have purified water in their homes. Since the water sources were contaminated by the minerals that the fire volcano expelled in the village. The capacity of the 45 liter ONIL filter benefits families by providing them with abundant purified water for their daily consumption.

Each beneficiary family was trained in the use and maintenance of the ONIL water filter, for them to be used properly; they were left installed for the corresponding function.

With the ONIL water filter, they will be able to obtain purified water regardless of the source of the water: river, rain, water well or faucet water (not drinkable).

The filters with capacity of 45 liters that were installed have the following parts:

- A plastic lid
- Two buckets
- One valve
- One ceramic candle

PROJECT: 200 WATER FILTERS FOR THE DAMNIFIED FAMILIES OF THE FIRE VOLCANO  
 Place: Community El Ceylan, Escuintla

#### ACTIVITY SUMMARY

On June 3rd 2018, Guatemala experienced one of the strongest natural disasters the country has had. The Fuego volcano erupted, affecting the villages, hamlets and colonies surrounding the Volcano, many of them belonging to the municipality of Escuintla, Alotenango and San Pedro Yepocapa, which were buried by the violent pyroclastic flows.

The families that were affected by the volcanic disaster of the Ceylan community were benefited with an ONIL water filter in each house, allowing them to have purified water in their homes. Since the water sources were contaminated by the minerals that the fire volcano expelled in the village. The capacity of the 45 liter ONIL filter benefits families by providing them with abundant purified water for their daily consumption.

Each beneficiary family was trained in the use and maintenance of the ONIL water filter, for them to be used properly; they were left installed for the corresponding function.

With the ONIL water filter, they will be able to obtain purified water regardless of the source of the water: river, rain, water well or faucet water (not drinkable).

The filters with capacity of 45 liters that were installed have the following parts:

- A plastic lid
- Two buckets
- One valve
- One ceramic candle
