

Patty Mangel
March 17, 2014
chem. per. 2.

On Saturday chemistry was made more clear for me. I learned how the periodic table came to be, I finally found out that the 2 rows on the bottom of the periodic table actually belong in the table, it's just not placed there due to the size of the paper. I learned that it takes exactly 8 min. to receive the sun light also I learned about Galileo, Mendel, and Newtons teachings. At the beginning we were all given backpacks and wer provided with a periodic table and Dr. B's book. The presentation was Great! I really enjoyed it, apart from learning it was so much fun.

You are amazing, Linda! Thank you and everyone else who put their time, effort, and funds into this project. What a wonderful opportunity for our students to get excited about science. I can't wait to talk to the kids about their experience. I wish I could have been there!

Good Morning Team Quark!

After seven months of preparation, TODAY we implemented the first session of our District 5320 Matching Grant!! What a success!! I hope this will become an annual event to support 2nd Language Learners in our community who are interested in the sciences. We had a really great turnout of students and parents.

I want to thank my fellow Rotarians for their support today! Marianne, Mike, Greg, YOU were super! Again, my special acknowledgement has to go to my translator Brenda and graphic artist Pablo who made this project emerge into reality. And of course Ken for his grant prep help and Uli and Valerie for recruiting!!

We provided syllabi and breakfast. Each learner received a backpack with all materials provided, including texts in English and Spanish, periodic tables and writing materials. These were already be assembled before the workshop through volunteer efforts by my Interact Club. They left full of both food and knowledge.

I really like the class on Saturday because I interact with new students and I learn more about chemistry which I found it really interesting. I also like that we not only got In Quest of the Quark but also the Spanish version of it. which I bet many parents are going to read it. It was short and straightforward, and really helpful for students who are interested in taking chemistry for the science courses.

Brian / Cookie:

The March issue arrived today, and was particularly distinguished by the magnitude of its intellectual achievement. The layout and content are always impressive, and the integration of graphic arts of various types are not only attractive but also supportive of the textual material. Overall, this magazine can always be said to be a very impressive product that any city would be proud to have as a resource.

This issue, however, has gone far beyond that norm. Linda Bartrom-Olsen's article "In Quest of the Quark" was a one-of-a-kind achievement. I can't think of any other city in all my experience that would support, and appreciate, an academic level of this nature more than Villa Park. The general topics of particle physics, of quantum field theory and the constituent definitions of bosons and fermions are not really simple for most people to grasp, however they could not have been presented in a clearer, simpler, or more palatable fashion for a *non-scientific audience*.

With the recent isolation of the Higgs Boson at the CERN in Switzerland, this is a very current subject and you have rendered a distinct service to the community by this publication.

Thank you.

— Pete Moriarty.
