

**Children's Emergency Service Revive Unit**

Our children's health is the most important guarantee for our future. Children depend on us to ensure their health and safety and they do not have a social or political power. Therefore health care for children should be taken with a public responsibility and should be organized. Resuscitation unit is very important to be brought back to life functions in traumas that stop the vital functions of our children. The revive units are required to be equipped with tools such as electronic systems, the heart defibrillator, artificial breathing apparatus that provide continuous monitoring of patients' vital functions. There is no resuscitation unit at Morris Schinasi Children's Hospital that is located in the center of Manisa. **420 m2** physical conditions of the emergency services will be improved as well as a reference implementation except for the purchase of equipment needed in the revive unit. The number of requisitions per day to the Children's emergency services are recorded as **306** people. It is observed that the average of these applications are **234** green, **59** yellow and **16** red cases. In Manisa **0-14 age child** population of is **83.113**. This information has been taken from the population registration system based on the 2013 addresses.

The project consists of two phases.

Acquisition of technical equipment : 66.030 USD (Acendis Proforma)

Improving the physical conditions of the emergency service : 28.712 USD (Vogues Proforma)

**Total : 94.732 USD**

Current Situation

Reference Implementation
