FARM WELL DRILLING PROJECT

PURPOSE: Job Creation, Nutrition, and Supplemental Income

- Living Water Christian Mission owns over 250 acres in multiple locations. Much of this consists of very fertile farm land. Even though some of this land will be re-purposed for a university and other buildings as the mission expands, most of it can be currently used for growing a wide variety of crops.
- The farm, when in full operation, will employ many Haitian families as "share croppers." These families will provide manual labor and security over the property. They will live on the property and own a percentage of the harvest. This is a very common method of running a farm in Haiti.
- The harvest from the farm will serve two purposes. (1) Living Water's school serves a meal to over 700 students and teachers every school day. For some of these students, it is their only meal of the day. The harvested crops will help in providing that meal. (2) Other produce will be sold at market. This will supplement what LWCM receives from donors so that over time they can become more self-sufficient and less reliant on donor income.

BUDGET (in USD):

Well drilling company – Hands Together – inclusive of underground pipes. (attachment)	\$18,200.00
Note: we were advised that 12" pipe was necessary for irrigation of the farm. This estimate is for 12" pipe instead of smaller ones as we have used in the past for drinking water.	
Submersible pump	\$ 5,000.00
Generator	\$10,000.00
20' above ground pipes \$650 x 16 pipes	\$10,400.00
Note: these pipes will distribute the water to the irrigation canals	
Labor & Installation	\$ 5,000.00
(Includes electrician contractor and locals to dig irrigation canals)	
TOTAL ESTIMATE:	\$48,600.00
