

There are 15 million people blind in India. Every third blind person in the world is an Indian

But.....does this really bother us.

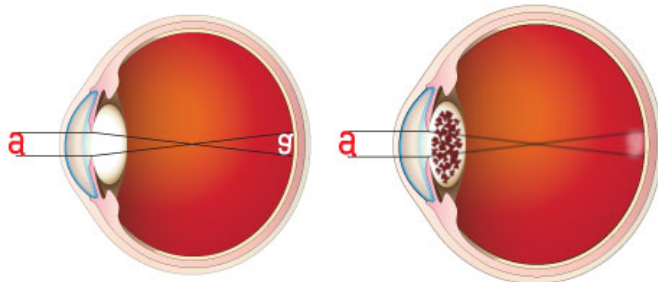

In India the tragedy is that 80% of the blindness is either curable or avoidable. Also while a majority of the population lives in rural areas, the services are located in urban cities.

Cataract

is one of the main cause of this blindness

What is cataract ??

The normal lens focuses the light on the retina.

The clouded lens distorts and blocks the light, making the resulting image appear blurred or cloudy.

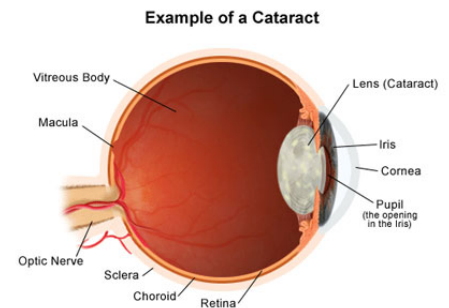

Fig. 2 A cataract interferes with vision because it obstructs the lens of the eye through which light passes, causing light to refract differently than in a healthy eye.

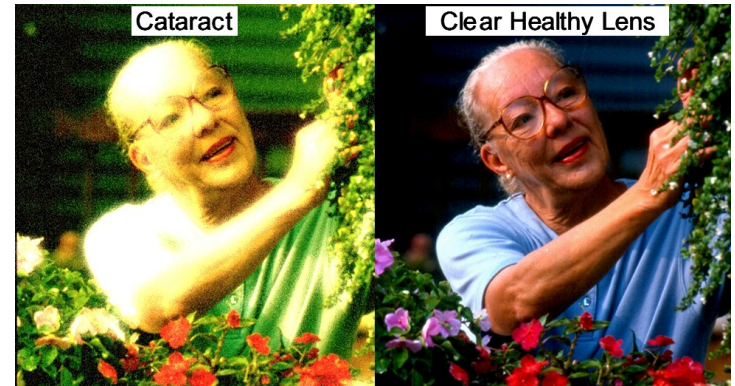

LIFE OF A CATARACT PATIENT

Same Scene Viewed By A Person With:

Normal Vision

Cataracts

Cataract

Clear Healthy Lens

The image is blurred. Colors are distorted. Glare is present.

The image is clear. Colors are vibrant.

Normal Vision

Normal vision without cataracts

Cataract

Blurred, foggy or fuzzy vision with cataracts

WHAT WE CAN DO

BE PART OF ONE OF THE BIGGEST CATARACT OBOLISION DRIVE IN DISTT PALWAL
HOW ABOUT CURING 1000 PATIENTS ????
SOUNDS GOOD, RIGHT ?
YOUR SMALL CONTRIBUTION CAN DO IT.

HOW WE CAN DO IT

- Conducting a medical check up camp, which will help diagnose the need of operation or medication in the patients.
- Once the patients reach the base hospitals, all their pre-operative tests will be done for carrying out the operation next day.
- Operation for lens change will be performed.
- Patients will be kept in hospital for one more day for post operative treatment after which he/she will be given medicines/ wearing glasses etc. and discharged.

WHERE ARE WE DOING IT

THANK YOU
